

## Team NTG

N-ovation Technology Group (NTG) combines military service-based precision and commitment, with more than 40 years of Information Technology (IT) architecture and integration expertise, to provide our customers best-in-class IT solutions. We take pride in building a partnership that ensures we understand your challenges, assist to clearly define your goals, and develop end-to-end results.

## Overview

## The NTG Experience

NTG has been implementing emerging technologies, worldwide, for Fortune 500 corporations, government agencies, and non-profit organizations. We connect the full spectrum Internet of things (IoT) through secure enterprise WiFi and effective cloud computing, by migrating your on-premises IT infrastructure, network, and data to commercial or private cloud services. Our team of engineers will design, build, manage, and secure your network, infrastructure, and connectivity.

Whatever the challenge, NTG will optimize your agency/organization's current state, using proven business strategies and best practices that comply with federal regulations and industry best practices.

### WHO WE ARE

NTG is a CVE certified Service-Disabled Veteran-Owned Small Business (SDVOSB), providing best-in-class IT Architecture design, and Integration solutions. We provide innovative, beneficial solutions and customize implementation and support per our customers' unique requirements.

### WHAT WE DO

Whatever the challenge, NTG will optimize your company's network infrastructure using proven business strategies and industry standards.

Our project managers and network engineers are at the forefront of strategy and technology across government and commercial industries.

### WORK WITH US

NTG is established on the core strength of integrity, transparency with clients, and consistent past performance. Dedication to excellence and commitment to customer satisfaction are top priority. NTG's values are apparent in everything we do. Our goal is to elevate your business to greater heights by providing a better customer experience.

## NTG's Service Commitment

We are founded on the core principles of integrity, excellence, and customer satisfaction. Our goal is to be an industry leader and deliver an outstanding experience to every customer. We vow to always be upfront and transparent, and ensure our solutions are designed to meet your unique requirements. We don't believe in overstating our abilities or making exaggerated claims. Instead, we are committed to delivering the best of our combined 40+ years' experience and expertise, to earn your confidence and trust, as we innovate the future together.

## Core Competencies

**Secure Enterprise WiFi:** NTG engineers are experts at building and deploying wireless enterprise networks, to manage the full spectrum Internet of Things (IoT), at large facilities, such as hospitals, hotels, retirement communities, and government buildings. Our secure WiFi network provides employees and guests with fast, and reliable internet access from all their devices, while managing their access with a portal page and content filtering.

**Cloud Integration and Transformation:** We apply the highest industry standards and best practices to build the best cloud service or solution for migrating your On-Premises operations to a secure cloud environment. NTG will guide you in determining the best and most cost-effective strategy for full migration or partial integration of your existing infrastructure, servers, database, or middleware. We will manage and deploy your migration to a commercial cloud service provider, or build a private cloud service for your agency/organization, utilizing a Virtual Private Network (VPN) and SSL technology to encrypt each session, giving your teams fast and easy access to applications and data without compromise.

**Network Engineering:** Network infrastructure is a necessary cost of doing business; however, it can be a major capital expenditure for any organization. It is critical that your network infrastructure is designed with cost, scale, resiliency, and high availability in mind.

With extensive technical expertise and real-world experience, NTG engineers specialize in full scope network engineering. Our services include designing, building, scaling, installation, and management of enterprise networks, incorporating cabling, appliances, servers, routers, firewalls, and switches; networks that are highly available, secure, scalable, and resilient.

**Project Management:** NTG's proficient Project Managers function as a primary point of contact for the team through every phase of your project, from kick-off, through deployment and steady-state operation. We provide proactive, regular communication, scheduling, tracking, management, and reporting services. NTG project management services minimize disruption to your staff, so they can stay focused on critical projects already underway.

**WayFinding:** NTG's WayFinding uses cellular and WiFi connections to provide indoor GPS service to visitors to help them locate their destination in large building complexes, such as hospitals and conference centers. WayFinding uses a set of technologies – interactive maps, location services, kiosks, and mobile apps – to provide turn-by-turn directions on iOS and Android smartphones. WayFinding takes the stress out of getting from Point A to Point B, and it can be safely deployed on low-security wireless networks, such as Guest WiFi.
